

The Solving Equations Commandments

1. Thou shalt Remove all parenthesis by distribution.
2. Thou shalt put all like animals together on each side of the equation.
3. Thou shalt move the smallest variable unto the largest variable.
4. Thou shalt then remove constants
5. Thou shalt then do any multiplication or division or Thou shalt multiply by the inverse.

Always remember the two major equation commandments:

1. What one doest to one side of the equation, thou shalt doest to the other side.
2. To move or remove a number thou shalt always do the opposite.
